Technical Skills

- Languages & Frameworks: Kotlin (5 years), Java (5 years), C#, Python, TypeScript
Android: Jetpack Compose, MVVM, MVI, Coroutines, Flow, Hilt, Dagger, Koin, Room, Retrofit
- Development: Git, CI/CD, TDD, Agile, REST APIs, GraphQL, Android SDK, Serial
- Communication Tools: Android Studio, Cursor, GitHub Actions, Figma, Jira, Firebase, Google/Facebook Analytics
- Additional: AI-assisted development, SDK development, Shopify integration, Android Auto

Education

2011-2015

Masters - Mechatronics & Robotics
Highest 1st Class Honours
University of Leeds

Android Engineer

Highly versatile Android developer with 5+ years of experience delivering production applications ahead of schedule. Expert in modern Android development (Kotlin, Compose, MVVM/MVI) with proven ability to rapidly master new technologies and frameworks. Track record of leading technical initiatives, improving team efficiency, and architecting scalable solutions for high-transaction applications. British Decathlon Champion 2022 - expertise in quickly mastering complex technical skills translates directly to software development excellence.

Experience

Android Developer | Ensemble Systems, Vancouver | July 2024 - January 2026 AI Development & Wearables Innovation

- Spearheaded Meta AI wearables project, developing cutting-edge AR applications for emerging platforms
- Led company-wide research on AI development tools, presenting Android workflow optimizations using Cursor across multiple AI models to improve development velocity
- Drove adoption of AI-assisted development practices across engineering teams

High-Scale E-Commerce Platform

- Developed and maintained customizable Shopify-integrated app serving thousands of merchants
- Architected and presented new checkout flow to company, handling \$80M+ USD in monthly transactions
- Implemented comprehensive automated unit testing, Facebook Analytics, and Google Analytics integration
- Extended skillset to TypeScript for full-stack feature development

Large North American Broadcaster - News Application

- Modernized legacy codebase by converting Java factory patterns to idiomatic Kotlin
- Migrated UI from XML to Jetpack Compose, improving maintainability and development speed
- Created comprehensive debug screen for QA and development teams
- Implemented Android Auto integration, expanding platform reach

Android Software Developer | Westgate Technology Corp, Delta | January 2024 - April 2024

- Created MVI architecture app with custom launchers, firmware updates, and system services
- Achieved excellent test coverage with persistence across entire Android lifecycle
- Developed low-level serial communication interface for hardware integration
- Delivered Power Management feature in 2/3 of estimated time through efficient problem-solving
- Localized applications across 7 languages for international deployment
- Performed live troubleshooting across ecosystem of apps deployed in multiple countries

Android Developer | FoodCLUB, Remote | November 2023 - June 2025

- Proposed and led complete app refactor to MVVM architecture, improving code maintainability
- Designed and implemented Android CI/CD pipeline meeting tech lead specifications
- Led cross-team technical discussions on CI/CD pipeline architecture
- Developed beautiful Compose screens with navigation integration
- Architected offline-first data priority and storage system
- Collaborated with backend, iOS, and UI teams on feature design

Junior Android Developer | Sonin, Reigate | June 2022 - August 2023

- Implemented video capture, Stripe payments, Twilio messaging, and comprehensive analytics
- Developed and published SDK with Play Console releases and performance optimizations
- Created custom Compose UI components, coordinating with design and web teams
- Contributed to 24% sprint cycle time reduction over 9 months using GitHub Actions and AI tools
- Reduced average PR pickup time by 50% through CI/CD technology improvements

Freelance Mobile Developer | January 2020 - June 2022

- Built multiple production apps from concept to Play Store release
- Charge My Car: UK-based EV charge point finder with Room database, Retrofit/OKHttp, and maps
- Tri-Tap-Toe: 3D multiplayer game with AI bots, Firebase, notifications (5-month solo development)
- Event Horizon: 2D endless runner using LibGDX framework (6-month solo development with alpha testing)
